

GROUND MOUNTED SOLAR PANEL SYSTEMS

As The Boston Solar Company was growing in the North East U.S., they needed a reliable partner that specialized in the installation of helical piers for ground mounted solar panels and could operate anywhere in the country. A relationship was formed and Innovative Piering began installing galvanized helical piers in Connecticut, Massachusetts and further!

Project: #10872

Location: Dunstable, MA

General Contractor: The Boston Solar Company

Innovative Piering installed 24 helical piers for Boston Solar to erect the 25KW system in one full day. Boston Solar's professional technicians safely worked right along-side the pier installation crew installing the needed hardware and structural supports. The helical piers were designed to be installed to a 5' depth to provide the ability to combat wind loads.
